SECUREPOINT ANTIVIRUS PRO

EXCELLENT ENDPOINT PROTECTION FOR COMPANIES OF ALL SIZES

Excellent performance, top-class detection rate, centralized cloud management

SECUREPOINT UNIFIED SECURITY

Unified Security means ensuring network security at all levels. Just as in a car, where headrest, seatbelt, and crumple zone work together to achieve maximum safety, individually effective IT security measures combine to form a robust security infrastructure.

Take a comprehensive approach to IT security with Unified Security by Securepoint.

One of the best scan engines

Securepoint Antivirus Pro uses the IKARUS T3.scan.engine, one of the best available engines worldwide.

Centralized cloud management

License, update, and infection status can be managed in a single interface regardless of the location of the endpoint device.

Centralized cloud management

The central management portal displays all installed client systems, including their license, update- and infection status. It doesn't matter at which location individual devices are located since the communication is securely conducted over the internet. Authorized resellers have access to all information for multiple clients using a single login.

There are no additional licensing fees for the management portal. There is no effort required for installation, updates, and maintenance.

Fast and reliable

There are two fundamental criteria for choosing an antivirus software: performance and a strong detection rate. Both are primarily achieved through the integration of the award-winning scan engine in Securepoint Antivirus Pro. The IKARUS T3.scan.engine is recognized as one of the best globally.

Comprehensive virus protection

Securepoint Antivirus Pro protects PCs and servers from viruses and malware through an on-access scanner and scheduled on-demand scans.

Low system resource usage

The entire system architecture of Securepoint Antivirus Pro is designed to operate quickly and with minimal resource usage.

This integration ensures that businesses can rely on industry-leading detection rates while enjoying fast and reliable operation.

Comprehensive and accurate

Securepoint Antivirus Pro can be installed on both Windows desktop and server operating systems using a single application and license. It protects PCs and servers from viruses and malware through an on-access scanner and scheduled on-demand scans.

With its fast update cycles and outstanding scan engine, Securepoint Antivirus Pro provides reliable protection for businesses.

Antivirus Pro benefits:

- High performance and resource-efficient
- Integration of the award-winning IKARUS T3.scan.engine
- Microsoft Windows 10 Ready
- Timely updates
- Centralized cloud management (no installation required)
- Scheduled scans and comprehensive scan profiles
- Quarantine function
- Protection of settings through password
- Cost-effective and includes all product updates

THE ANTIVIRUS FOR COMPANIES OF ALL SIZES

Excellent endpoint protection

Antivirus Pro by Securepoint was awarded as the best antivirus software in the techconsult Professional User Rating 2023. With over 2,000 users voting, Antivirus Pro has been crowned the champion in the Endpoint Security category. Experience the best in class!

System requirements

Antivirus Pro supports all current operating systems supported by Microsoft mainstream support. For a detailed list and additional system requirements, please visit:

www.securepoint.de/av-requirements

Before installing Securepoint Antivirus Pro, it is necessary to uninstall any other antivirus programs present on the computer and restart it.

After installing Securepoint Antivirus Pro, it is recommended to perform a quick system scan.

"From the beginning, our goal in developing Securepoint Antivirus Pro was to provide our customers and partners with a centralized console for managing antivirus protection on all their PC and server systems. Thanks to cloud technology, this is now possible from anywhere, without the need for installation or any maintenance."
