BETTER IT SECURITY WITH EVERY STEP

UNIFIED SECURITY CERT+

UNIFIED SECURITY CERT+

A hands-on IT security standard

With concrete recommendations, tangible actions, and measurable results, Securepoint Unified Security Cert+ improves IT security in small and medium-sized enterprises (SMEs). Cert+ also opens up new business opportunities for IT professionals.

Simply analyzed and documented

Inventory is taken easily using a web application on a smartphone or tablet.

Clear statements, clear measures

The IT security status is explained clearly using visualization and a points system.

Become a part of the community

Discuss, develop, and improve the Cert+ IT security standard.

Continuous development

Under the auspices of Securepoints, Cert+ is being further developed by the members of the community. The goal is to create a comprehensive and practical IT security standard specifically for SMEs. The Cert+ community consists of three specializations.

Cert+ Auditor

Examines the quality of the existing security architecture, identifies gaps, and documents areas requiring action.

Cert+ Engineer

Supports the auditor with technical expertise, plans new security structures, and translates the need for action into concrete measures.

Cert+ Expert

Prepares independent reports on existing IT security measures on behalf of companies or public authorities.

The auditor exam is a prerequisite for further involvement in the Cert+ Community. Each specialization provides access to new training opportunities and other benefits.

IT security without compromise: Unified Security Cert+.
