NO COMPROMISES ON SECURITY

**NO BACKDOORS –
GUARANTEED**

GUARANTEED WITHOUT TECHNICAL BACKDOORS

IT SECURITY BY SECUREPOINT.

Full access control

Owners or administrators determine who has access to security solutions.

Closed system

No backdoors means no planned vulnerabilities in the system.

Guaranteed no backdoors

Securepoint GmbH, based in Lüneburg, Germany, guarantees full compliance with Section 2.4 of the "Supplementary Contractual Conditions for the Purchase of IT Products (EVB-IT Purchase Terms and Conditions - Version 2.0 dated March 17, 2016)": Securepoint delivers IT products free of harmful software (viruses, worms, Trojans) or other functions that violate the confidentiality and security interests of the client. These may include, for example:

- Functions for the unwanted deletion/export of data
- Functions for the unwanted modification/manipulation of data or the process logic
- Functions for the unwanted import of data or unwanted functional enhancements

Securepoint undertakes to ensure that the products supplied do not contain any hidden access codes or access mechanisms that enable third parties to gain access that is not controlled by the customer or that deactivate security-related functions. Securepoint products do not intentionally weaken encryption methods (e.g., through artificially shortened keys, incorrectly implemented encryption algorithms, weakened random number generators, hidden master keys, or information transmitted covertly in the data stream that facilitates decryption).

"We guarantee that IT products developed by us are manufactured without backdoors."

René Hofmann - CEO

Espionage prevented

Technical backdoors for government actors could be misused.

Maximum data protection

No unplanned data leakage via backdoors.

IT Security made in Germany & IT Security made in Europe

Securepoint is a member of the German IT security association TeleTrust. Securepoint solutions for network security, mobile security, endpoint protection, and WLAN management have been awarded the "IT Security made in Germany" and "IT Security made in Europe" quality marks.

With its expertise and products, Securepoint meets all the important criteria required:

- The headquarters for research and development is located in Germany and Europe
- The guarantee of trustworthy security solutions
- The commitment to no hidden access for third parties (no backdoors)
- The assurance of compliance with German and European data protection law

Achieve technical network security with the Securepoint UTM firewall

All experts agree that compliance with data protection regulations is not possible without the use of a UTM firewall.

- Protection against data loss
- Securing communication
- Enforcing access protection and access rights
- Separation of different departments/databases
- Regular reporting on the current network status
