

•• SECUREPOINT

VIRTUAL VAULT FOR COMPREHENSIVE DATA PROTECTION

# UNIFIED BACKUP

# PROTECT COMPANY DATA

## WITH UNIFIED BACKUP BY SECUREPOINT.

### **Encrypted backup**

Encrypted data transfer to the Securepoint cloud

### **Simple management**

Configuration or data recovery possible online from anywhere

### **Data backup for the highest demand**

With Unified Backup, you can leave your tapes and hard drives in the drawer. Back up your data automatically online in the cloud – and protect yourself against malfunctions and data loss. From software to hardware, you can rely on IT made in Germany: the cloud service's servers are located geographically redundant in German data centers.

Unified Backup backs up data from physical or virtual servers and devices running Microsoft or Linux operating systems or hypervisors such as VMWare. It also supports application-aware backup of applications such as Microsoft SQL, SharePoint, and Exchange Server.

### **Backup encryption**

To protect your data, all backup content is encrypted using Advanced Encryption Standard (256-bit AES) before being sent to the cloud. This prevents espionage, blackmail, or data manipulation between local storage and backup.

### **Frequent backup intervals**

For regular data backup, you can select up to 44 individually configurable backup points, which also serve as restore points. Instead of weekly or monthly backups, this allows you to perform up to four backups per day.

### **Double secured**

The backup cloud is geo-redundant, encrypted, and thus meets all requirements for good data backup.

### **Efficient automation**

The Unified Backup software automatically backs up all changes at user-defined intervals using DeltaPro technology.

### **Backup servers in Germany**

No data transfer across the pond, no support from distant call centers, guaranteed to be free of backdoors.

**With reliable and comprehensive data backup, ransomware will have just as little impact on your data in the future as system crashes, accidents, or user errors.**

### **Geo-redundant backup**

Data backup in several German data centers

### **Close-mesh security**

Fast and efficient transfer of recently edited files

### **In case of emergency: Fast disaster recovery**

In the event of an emergency, you need to be able to restore your data quickly. Thanks to a wide range of deployment options, you can perform backup disaster recovery immediately. According to your requirements, restoration takes place on dedicated hardware or in virtual environments.

**Protect company data, customer data, project information, and intellectual property with Unified Backup from Securepoint.**

## **SECUREPOINT UNIFIED SECURITY**

Cybercrime is constantly evolving. New types of attacks, human error, and technological advances present companies and public institutions with ever-changing challenges.

To effectively counter a wide range of threats, Securepoint relies on the principle of "unified security." This means that different, complementary, and reinforcing protective measures are combined layer by layer to create a holistic defense mechanism.

**Data backup with Unified Backup is an important component of Unified Security.**

# BACKUP FOR BUSINESSES

## Customized automated backup

Unified Backup secures your data up to four times a day — you determine the exact intervals. To avoid having to move huge amounts of data each time, incremental backups are performed, meaning that only data that has changed is backed up again.

Unified Backup uses DeltaPro technology with quick file scanning and efficient data compression, enabling backups to be performed quickly and in a resource-efficient manner. An initial full backup serves as the basis for the incremental backups.

## Central control of all instances

Securepoint Unified Backup is the ideal tool for offering data backup as a service! There are no hardware or maintenance costs, nor are there any software license fees. You only pay for the storage space you use.

Once the backup software is installed, you can control everything centrally from a location of your choice: A comprehensive user interface is available online for configuring backup intervals and regular monitoring. This gives you an overview of all your customers' backups.

The Unified Backup software allows you to easily manage data backup and recovery for different devices, users, or organizations. The clear and easy-to-understand interface of the backup portal allows you to easily plan and execute all tasks for all customers.

## Highlights at a glance

- Easy setup and operation via web portal
- Individually configurable backup intervals
- Up to 44 freely selectable restore points
- DeltaPro technology reduces unnecessary data traffic through incremental data storage
- Encryption of all data before transmission
- Versatile recovery options in the event of data loss
- Excellent value for money
- Clear cost structure
- EU GDPR ready
