SECUREPOINT

NETWORK SECURITY AT ITS BEST

UTM FIREWALLS

RELIABLE NETWORK SECURITY

WITH NEXTGEN UTM FIREWALLS BY SECUREPOINT.

All-in-one IT security solution
Firewall, router, and unified threat management (UTM) in one device.

All-inclusive licensing model
Hardware, software, service, and support combined in one single license.

Maximum security in one license

The Securepoint UTM firewall combines a firewall, router, and unified threat management (UTM) in a single device. You receive hardware, software, service, and support in one license — guaranteed to be without backdoors, but with an integrated VPN client.

Once purchased, a license provides comprehensive protection. Thanks to automatic license renewal, the level of protection is automatically maintained until the clearly desired end date. Licensees can use the online portal to automatically receive information about current contract terms by email and adjust licenses directly as needed.

Safe surfing & working

With the powerful content filter, you can block websites or content categories for specific users and time periods — ideal for protecting minors or regulating social media. The Threat Intelligence Filter is continuously updated with the latest information about dangerous content and connections and blocks dangerous IP addresses.

Cloud-based real time protection

The Cyber Defense Cloud updates and protects all firewalls in real time. Using machine learning and swarm intelligence, it analyzes over 300,000 events per second — for true zero-day protection.

Strong protection for email and Wi-Fi

The excellent email security checks all incoming messages using various filter mechanisms and reliably wards off threats. Modern access methods, one-time passwords, captive portal, and strong encryption ensure simple and secure Wi-Fi use — even for guests.

Flexibility & Control

With the Securepoint DynDNS service, your firewall remains accessible even when IP addresses change. The integrated Let's Encrypt certificate function increases the security of your connections. Automatic, encrypted backups are stored securely in the Securepoint Cloud.

Guaranteed to be without backdoors
Software development in Germany and without hidden access points.

Integrated VPN client
Also included: the Securepoint VPN solution for encrypted connections.

Smart solution for medical practices: TI proxy & TI gateway
The Securepoint firewall enables direct connection to the telematics infrastructure via a TI gateway — without any additional hardware connectors. The TI proxy in the firewall translates special protocols from card terminals, ensuring a secure, uncomplicated connection to the TI gateway.

UTM firewall hardware
Depending on your needs, various hardware models are available for purchase, rental, virtual use, and as a managed service.

From the small Black Dwarf to the large RC2000RR, people in large and small networks are reliably protected against viruses, Trojans, and spam. The high-performance, future-proof hardware and our security software developed in Germany have received multiple awards for their performance.

SECUREPOINT UNIFIED SECURITY

Cybercrime is constantly evolving. New types of attacks, human error, and technological advances present companies and public institutions with ever-changing challenges.

To effectively counter a wide range of threats, Securepoint relies on the principle of "unified security." This means that different, complementary, and reinforcing protective measures are combined layer by layer to create a holistic defense mechanism.

Network protection with a UTM firewall is an important component of unified security.

SECUREPOINT

NETWORK SECURITY

UTM firewalls are the all-rounders of IT security. They monitor and control data traffic when surfing and emailing, manage roles and rights in the network, and enable remote workstations or branch offices to connect securely to the company network. Management and updates are carried out centrally.

Easy administration

- **Cluster configuration:** The new wizard simplifies the setup and management of multiple firewalls.
- **VPN connections:** Adaptive Secure Connect (ASC) makes setup particularly fast.
- **Zero-touch enrollment:** Firewalls can be conveniently put into operation remotely.

Highlights at a glance

Easy
- Central cloud management
- Start-up wizard
- German support
- Intuitive operation
- Training courses
- Flexible licensing models

Fast
- 64-bit architecture
- Powerful hardware
- Real-time updates
- Bandwidth management
- Fiber optic optional
- Advance replacement

Secure
- Protection against ransomware and viruses
- Secure VPN
- No backdoors
- Developed in-house in Germany
- German cloud locations
- Expert support
